

Back to Basics

60-Second Drill

Turn-on and don SCBA and make sure all straps are secure

Start by laying out the SCBA, helmet, gloves and mask. All other PPE should be donned appropriate for response

A clap of the hands indicates you are complete and to call time, check to make sure that firefighter is breathing off the SCBA and no skin is exposed

Place mask on face and check for seal, it is important to check your mask seal every time before you apply the regulator

Secure hood, make sure that no skin is exposed

Don all remaining apparel to include gloves, helmet and connect regulator to begin breathing off the SCBA

For extra credit practice having the firefighter activate the built in PASS alarm or overcome a regulator failure by engaging the SCBA bypass
